**Description of activities**

Our mission at AGILIS ENGINEERING is to help our customers to considerably reduce Total Cost of Ownership of their process equipment.

We supply a package of innovative solutions to our customers with one goal: helping to reduce their operating cost!

Our approach is not based on selling "volume products" but bespoke products and services enabling a total cost reduction of minimum 10%.

Our high tech graphite and composite materials, upgraded with our available enhancements and our engineering expertise enable us to propose unique added value solutions and to optimise your equipment.

**Main application domains**

We are active in the area of materials technology and we serve customers in the photovoltaic, semiconductor and heat treatment industries.

**Products and services**

- New or existing product
- Concept & Idea
- Fit for purpose
- Engineer & Design
- Prototype & Test
- Machine
- Repair & Decontaminate

**Customer references**

- Saint-Gobain
- Ceratizit
Trading area

- Luxembourg
- Greater Region
- Europe
- International

RDI

R&D Investments

20%

Industrial property

We have patents with Europeans partners.

Technological/Technical capabilities

- Engineering,
- Design
- Machining
- Thermal cleaning

Equipment

- Saw
- Cnc milling and drilling machines
- Furnaces

Technology keywords

- Semiconductors (Main technology keywords)
- Surface treatment (painting, galvano, polishing, CVD, PVD) (Main technology keywords)
- Machining (turning, drilling, moulding, milling, planning, cutting) (Main technology keywords)
- Process Plant Engineering (Main technology keywords)
- Cleaning Technology (Marginal technology keywords)
- Solar/Thermal energy (Marginal technology keywords)
- Photovoltaics (Main technology keywords)

**Areas of competence**

- Engineering
- Materials and surface treatment
- Trade
